Krishna Gopal Tailor

Sr. Delivery Backend AI Engineer · 15 Years of Experience

Udaipur | 8764213959 | banti.kaneria@gmail.com
Linked In: linkedin.com/in/krishna-tailor-3b26207a/

Career Summary

- Build agentic-AI systems: MCP tool servers, LLM / RAG tool-use pipelines, and multi-turn agent evaluation.
- Develop apps using Python, Django, DRF, Flask, GraphQL, PostgreSQL, and MySQL.
- Experience with AWS: Lambda, SQS, SNS, S3, EventBridge, AppSync, Secrets Manager, and CDK.
- Skilled in RESTful and GraphQL API design, microservice architecture, Docker, and CI/CD.
- Strong Object-Oriented and modular design; Python SDK development and Redis caching.
- Database performance tuning in MySQL and PostgreSQL using stored procedures, triggers, and indexes.
- Test-driven development with pytest; professional skills in Git and Jira.

Work History

Turing
Oct 2025 - Present

Sr. Delivery Backend AI Engineer

Building MCP tool-server simulations of 350+ third-party services for agent tool-use training, with a shared Pydantic validation and auto-populate framework and pytest scenario coverage.

Infosys
Nov 2024 - Oct 2025

Lead Consultant

Backend owner for an energy-sector operations platform — Python microservices on AWS Lambda, AppSync GraphQL, SQLAlchemy / PostgreSQL, and CI/CD on AWS CDK.

Ziniosedge PVT LTD
Feb 2024 - Nov 2024

Senior Technical Lead

Same energy platform before a direct Infosys offer — backend scope in Python, GraphQL, PostgreSQL, AWS Lambda, and CDK.

Arcgate, Udaipur
Feb 2015 - Feb 2024

Sr. Software Engineer

FinTech banking / payments APIs and a Python SDK, plus productivity tools — Python, Django, DRF, Flask, PostgreSQL, and AWS.

Gempulse Infotech PVT LTD (GIPL), Jaipur
Oct 2011 - Feb 2015

Software Developer

PHP web applications in CakePHP & CodeIgniter frameworks and WordPress CMS.

Education

B.Tech in Information Technology
2007 - 2011

Rajasthan Technical University, Kota, Rajasthan

Completed B.Tech in 2011 with 70%.

Senior Secondary (12th)
2006 - 2007

Govt. Sen. Sec. School (R.B.S.E)

Senior Secondary (Science - Maths) in 2007 with 69%.

Secondary (10th)
2004 - 2005

Govt. Sen. Sec. School (R.B.S.E)

Secondary in 2005 with 64%.

Skills

- Python — 8+ Years Experience
- Agentic AI (LLMs / RAG / MCP) — 1+ Years Experience
- Django (Python) — 6+ Years Experience
- DRF (Python) — 5 Years Experience
- Flask (Python) — 2 Years Experience
- AWS Services — 4 Years
- GraphQL — 2 Years Experience
- Microservices — 3 Years Experience
- Rest API — 6 Years Experience
- Python SDK — 1 Year Experience

Skills

- Git
- JIRA

Portfolio

Project Title: MCP Service Simulation Suite (Oct 2025 - Present)

Company: Turing

Language: Python

Tooling: MCP servers, Pydantic, pytest

Architecture: Stateful service simulations exposed as tool servers

Project summary

Near-exact simulations of 350+ third-party services delivered as MCP tool servers to train agent tool-use — replicating auth flows, endpoints, and edge cases so models call real APIs reliably. A shared Pydantic validation and auto-populate framework keeps derived fields, referential integrity, and tool schemas consistent across every simulated service.

Roles and responsibility

Build and harden the service simulations (email, design, messaging, terminal), own the shared validation framework, author multi-turn coding tasks with regression tests, and review side-by-side agent trajectories.

Project Title: Energy sector Dashboard (Nov 2024 - Oct 2025)

Company: Infosys

Language: Python

AWS Services: SNS, SQS, Lambda, EventBridge, AppSync, S3

Architecture: Microservice architecture

Database: PostgreSQL

Project summary

A central platform to manage biofuels documents, actualization, mass balance, and cost calculation for different divisions and countries. The backend is developed using microservice architecture with Python, AWS Lambda, SNS, SQS, Secrets Manager, AppSync, GraphQL, pytest, CI/CD pipelines, and PostgreSQL with the SQLAlchemy ORM; the frontend is built using React.

Roles and responsibility

Handle the backend by implementing APIs, understanding requirements, writing implementation plans, and developing APIs using Python, AWS services, GraphQL, pytest, and PostgreSQL; write unit tests, review code, prepare API documentation, and support the frontend team for API integration.

Project Title: Energy sector Dashboard (Feb 2024 - Nov 2024)

Company: Ziniosedge (payroll company) and Infosys (client)

Project Summary

This is the same project mentioned above, the difference being that I was initially working as a full-time employee of ZiniosEdge, with Infosys as the third-party client. Later, Infosys hired me as a full-time employee.

Title: Fintech (Banking, Digital wallet & ACH payments API)

Company: Arcgate

Language: Python

Library: Django REST framework

Framework: Django

Database: PostgreSQL

Project Description

A banking and payment platform for software teams building the next generation of financial products & services in regulated and unregulated industries.

Features

Customer registration for individuals and businesses, bank-account linking, ID verification of business (KYB) and individuals (KYC), digital wallets, payment processing, and money transfer.

Work summary

Designed product architecture, created RESTful APIs, designed the database structure, wrote the implementation plan and unit test cases, and worked with AWS services like SQS, SNS, Lambda, and S3.

Title: SDK for Fintech Domain

Company: Arcgate

Language: Python

Description

SDK development for the fintech domain which allowed teams to use all the features of the above fintech platform without calling the API endpoints directly.

Work summary

Designed product architecture, created SDK functions for the APIs, wrote the implementation plan, and wrote unit test cases.

Title: User Activity Analytics

Company: Arcgate

Language: Python · **Framework:** Flask · **Database:** PostgreSQL · **Caching:** Redis · **ORM:** SQLAlchemy

Description

A tool that captures and provides a ‘full funnel’ insight of users' activities on their computers — a powerful tool to maximize productivity, unlock hidden profits, and enable on-screen monitoring.

Features

Screen monitoring, video recording and playback, browsing-history tracking, productivity and non-productivity insights, reporting, and invoicing.

Work summary

Designed product architecture, created RESTful APIs, designed the database structure, and wrote automation / schedule scripts.

Title: Task Management Tool

Company: Arcgate

Language: Python · **Framework:** Django · **Database:** PostgreSQL

Description

A centralised place to allocate and track work assignments across the organisation with powerful add-on features. Integration with JIRA brings all tickets in and converts them into tasks, and the reporting module makes it easy to analyse work efficiency and utilisation.

Features

Custom task creation, auto task assignment, activity logs, notification centre, JIRA integration, advanced search, reminders, task frequency management, reporting, and analytics.

Work summary

Created RESTful APIs, designed the database structure, and wrote automation / schedule scripts.
